finalCode\Two.java

```java
1  /*
2  Write a Java program to create a class called Vehicle with a method called drive(). Create
3  a subclass called Car that overrides the drive() method to print "Repairing a car".
4  Expected Output:
5  Driving a vehicle
6  Repairing a car
7  */
8
9  class Vehicle{
10     void drive(){
11         System.out.println("Driving a vehicle");
12     }
13 }
14 class Car extends Vehicle{
15     void drive(){
16         System.out.println("Repairing a car");
17     }
18 }
19
20 public class Two {
21     public static void main(String[] args) {
22         Vehicle myVehicle = new Vehicle();
23         myVehicle.drive();
24
25         Car myCar = new Car();
26         myCar.drive();
27     }
28 }
29
```
